eMatrix Software PVT LTD - *Software Quality Analyst*

JULY 2022 - MAY 2025

- Worked as a Software Quality Analyst

Identie Enrichment - *Full Stack Software Developer*

NOV 2025 - PRESENT

- Worked as a Full Stack Software developer

PROJECTS (Software Developer Intern)

Hotel Booking Website (Trident Software Solution)

- Developed an hotel room booking Website for the covid affected
- created a separate login and user interface for covid affected and non affected people

Technologies Used : HTML, CSS and PHP

ERP front end Dashboard (eMatrix Software PVT LTD)

- Created a dashboard UI for eMatrix ERP newly introduced web version
- Technologies Used : HTML, CSS

PROJECTS (Automation Testing | Java Selenium)

ToDoist (WebApp used for Task Management)

- Wrote Scripts in Java Using Selenium Framework
- Tested the Task Creation features , Task Details and Task Deletion
- Tested project Creation and deletion
- Tested Profile Photo Uploading and Theme Changing
- GitHub Link - <https://github.com/itsMujeebRahman/ToDoist-Automation.git>

Technologies Used : Selenium Java, TestNG Framework, POM Model

PROJECTS (React Full Stack)

LinkedIn Clone

- Created a SignIn and SignUp form
- Able to Create Posts and Like , comment
- Able to delete the created posts and comments
- User can edit his Profile Including Profile Picture , Name and Description
- Able to send And receive Follow Requests and also able to Accept and Reject the friend Requests
- Realtime notification if anyone liked , comments or send follow request
- Suggested Users Section to send follow requests
- GitHub Link - <https://github.com/itsMujeebRahman/LinkedIn-Clone.git>

Technologies Used :

- React js Vite for FrontEnd
- Node js for BackEnd
- MongoDB as database
- Mailtrap for sending notification mails
- Bcrypt for encrypting Passwords
- Cloudinary for Storing Media files

ClothWear E-Commerce

- Simple and Dynamic product Grid
- Search Dialog Box for instant Product search
- Sign In and Sign Up option using Clerk Authentication
- Compatible with SmartPhone Screen Size
- Add to cart option with Adding and decreasing Qty
- Cart and checkout option to Stripe Payment
- Ordered List option for Order history
- Category for different Types of cloths and genders
- Sanity CMS for Managing content and storing Order Data
- GitHub Link - <https://github.com/itsMujeebRahman/ClothWear-ECommerce.git>

Technologies Used :

- Next Js for frontend
- Tailwind CSS for Styling
- Sanity as CMS and for Storing Data
- Clerk for user Authentication
- Stripe for payment and checkout

Volunteering (Mobile Application)

- Simple and Dynamic Activity Feed for volunteering opportunities
- Sign In and Sign Up option using Firebase Authentication
- Compatible with Smartphone Screen Sizes
- Option to Post a Volunteering Activity with details and images
- Categories for different types of volunteering activities (Environment, Education, Health, etc.)
- Firebase Firestore for storing activity and user data
- Push notifications for nearby volunteering activities
- Dedicated Profile Pages to customise user details and other settings
- GitHub Link - <https://github.com/itsMujeebRahman/Volunteering.git>

Technologies Used :

- React Native with Expo for frontend
- Tailwind CSS / NativeWind for styling
- Firebase for backend, authentication, and database
- Expo Notifications for push notifications

IERP

- Built a comprehensive sales and order management system capable of processing, tracking, and displaying detailed order histories and customer profiles.
- Developed seamless integration with the Shopify ecosystem via a dedicated NestJS service, allowing for bidirectional synchronization of e-commerce data.
- Engineered a modular backend architecture in NestJS, cleanly separating business logic into distinct domains (Orders, Sales, Customers, Shopify) for maintainability and scale.
- GitHub Link Frontend - <https://github.com/itsMujeebRahman/IERP-frontend.git>
- GitHub Link Backend - <https://github.com/itsMujeebRahman/IERP-backend.git>

Technologies Used :

- React Next Js for frontend
- Tailwind CSS for styling
- Better Auth Library for Authentication
- Postgres DB as Backend

Fiztro

- Developed a responsive e-commerce application for browsing, purchasing, and managing sports merchandise using Next.js, React, TypeScript, Tailwind CSS, and Zustand.
- Built end-to-end order management workflows covering order tracking, full and partial cancellations, item-level returns, refunds, and payment-status visibility.
- Designed modular service and repository layers for products, orders, cancellations, and returns, enabling straightforward migration from mock storage to backend APIs.
- Implemented quantity-level cancellation and return handling with eligibility validation, refund calculations, and synchronized order states.
- Added reusable UI components, responsive product pages, shopping cart, checkout, wishlist, customer profile, saved addresses, and payment methods.
- Improved reliability through TypeScript validation, ESLint checks, automated tests, and production-build verification.
- GitHub Link - <https://github.com/itsMujeebRahman/Fiztro-Frontend.git>

Technologies Used :

- React Next Js for frontend
- Tailwind CSS for styling
- Better auth for authentication
- Postgres for Database

EDUCATION

Kannur University, India - *Bachelors in Computer Application*

JUNE 2018 - APRIL 2021

Luminar TechnoLab, India - *Software Automation Testing using JAVA Selenium*

DECEMBER 2024 - MARCH 2025
